

kidney — image-then-treat sequence on the same skin-coupled histotripsy focused bowl (HistoSonics-like) (same-array transmit + passive-cavitation receive)

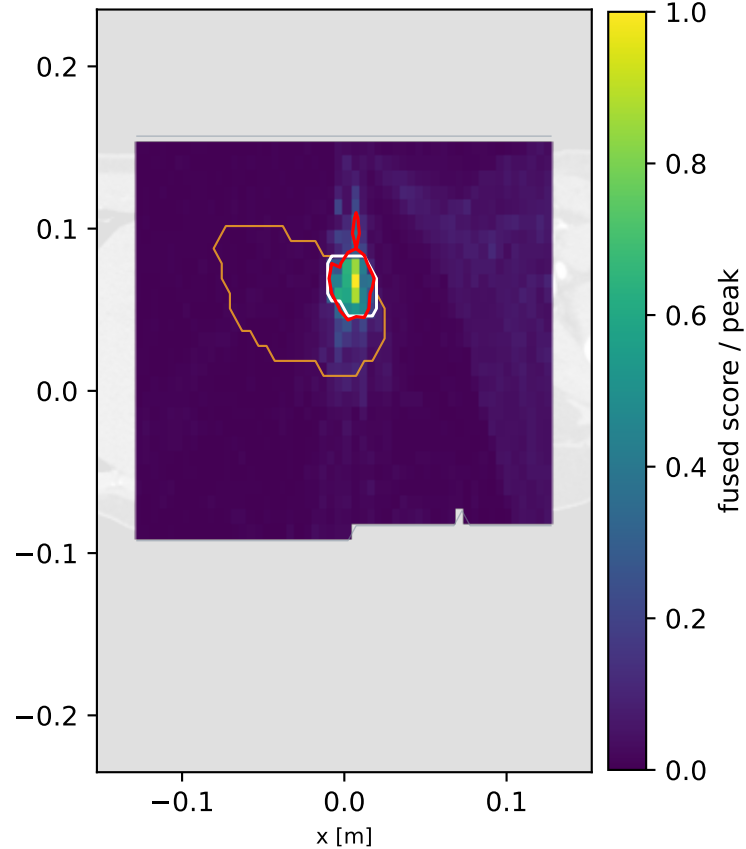

Planning CT slice + target / organ contour

Reconstructed image (linearised Born, single-pass H^1 -Tikhonov)
in-body peak = 0.246 (a.u.), multi-frequency imaging transmit, same aperture

Fused lesion-localization image
peak = 1, Dice = 0.82, CNR = 13.0

Focused-US treatment-support peak = 28.00 MPa
red: intrinsic-threshold cavitation isoline (26 MPa)
