

Staged-sonication frequency sweep for ms regimes (cavitation up to a peak, then down — all curves from the Rust core)

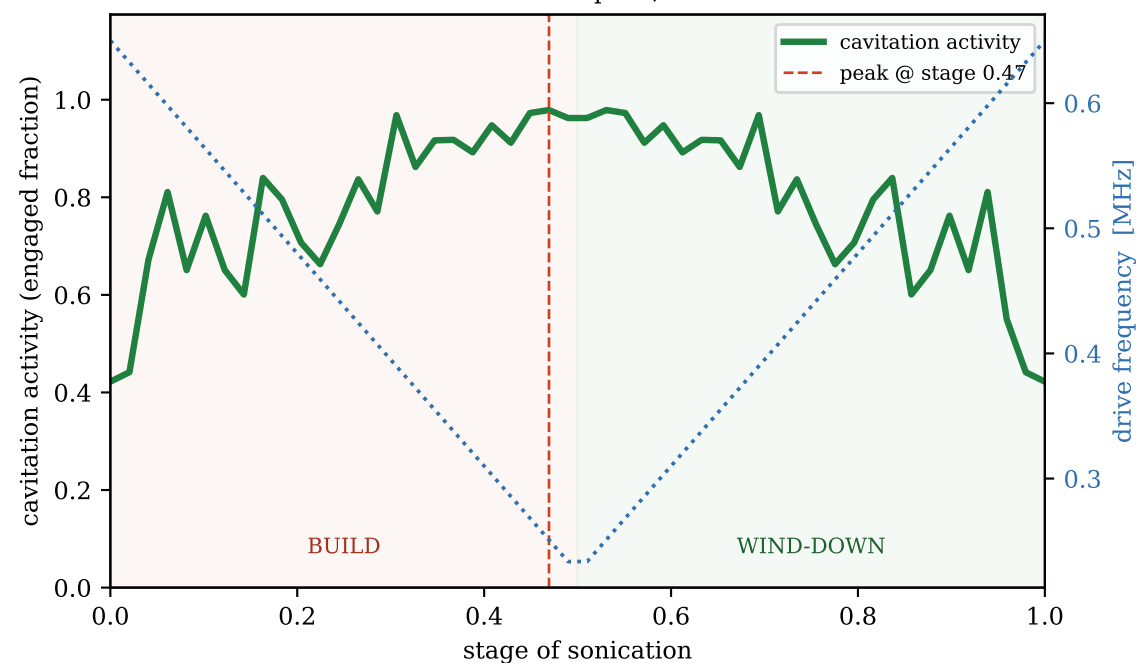

ms shock-vapor (1 MHz, 15 MPa, 10 ms)
cavitation: increase to peak, then decrease

residual built then cleared in wind-down: peak->end >1000x (near-complete)
(PRF 1 Hz, 8 pulses/spot)

ms sub-threshold cav (500 kHz, 18 MPa, 5 ms)
cavitation: increase to peak, then decrease

residual built then cleared in wind-down: peak->end 17.2x
(PRF 10 Hz, 50 pulses/spot)
