

Skin-coupled histotripsy focused bowl (HistoSonics-like) on kidney CT — 256 discrete elements + central imaging window, focal depth 84 mm, radius of curvature 146 mm

Oblique view — histotripsy focused bowl on skin surface
(red discrete elements outside body, lime = skin contact, cyan = organ focus)

Side view — array profile
discrete elements on hemispherical scaffold sit outside skin; beams converge at organ centroid
